User Stories

User	Story	Estimate	Priority
Visitor	I should be able to search for a -specific- restaurant so that I can find out where it is and reach out.		
Visitor	I should be able to see the reviews for a restaurant so that I can have an idea about it.		
Customer	As a customer I should be able to review a restaurant I've been to so that I can share my experience with the community.		
Owner	I should be able to add a new restaurant so that I can reach more people (customers).		

Owner	I should be able to edit my existing restaurants so that I can update the information (contact, location etc.) about them.		

Sprint

First sprint has covered *backend frame*.
Second sprint will cover *authentication system*.
Third sprint will cover *routes*, *components*, and *login page interface*.

Missing for this documentation for now (and will be added):
- pre- and post- conditions
- Sketches of the design
